

Superfund Green, L.P. Series B

11/2018

(formerly known as Quadriga Superfund, L.P.)

SUPERFUND GREEN, L.P. SERIES B ENDED THE ONE-MONTH PERIOD OF NOVEMBER 2018 WITH A PERFORMANCE OF 0.52 %

Superfund Green, L.P. employs a managed futures strategy that aims to achieve absolute returns in both rising and falling markets. The Superfund Green strategy uses proprietary, fully-automated computerized trading systems, which trade in more than 120 commodity and financial futures contracts globally. The fund primarily seeks exposure to the following sectors: currencies, interest rates, bonds, stock indices, metals, energy, grains and agricultural markets. The strategy is based on the implementation of a four-point philosophy consisting of (i) Market Diversification, (ii) Technical Analysis, (iii) Systematic Trading Systems, and (iv) Money Management. Superfund Green historically has had a low correlation to stocks, bonds and other investments, and therefore has the potential to improve returns and lower the overall volatility of a portfolio.

PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS.

Performance is expected to be volatile; the net asset value per unit may fluctuate significantly in a single month.

There is no secondary market for the investment offering and redemptions are only limited to certain periods.

Substantial expenses must be offset by trading profits and interest income for each series to be profitable.

Please read the additional risk factors associated with an investment in Superfund Green, L.P. Series B as described on page 2 of this document.

Investment into Superfund Green, L.P. Series B is closed to new investments. No subscriptions or follow-up subscriptions are possible or will be accepted.

The above chart is only an indication of the variety of markets traded or that may be traded by Superfund and is not indicative of relative allocations among these markets.

Annualized performance is a metric of a twelve-month mean that calculates the same rate of return for each twelve-month period to reach the equivalent rate of return reflected in cumulative performance since inception data.

Annual standard deviation is a measurement of an investment's volatility. The higher the percentage, the more likely an investment experiences swings between gains and/or losses.

The CISDM CTA equal weighted is a hedge fund index that reflects the average performance of Commodity Trading Advisors (CTAs). To be included in the equally weighted index, a CTA must have at least \$500,000 under management and at least a 12-month track record. This index is used to provide a better understanding of how Superfund Green, L.P. performs against an average of other funds in this asset class.

Chicago Board of Trade. An exchange where grain, gold, and Treasury Bond futures and options are traded.

European Central Bank

Reserve Bank of Australia

Correlation describes the relationship between two variables. A positive correlation of 1 describes two variables that develop almost simultaneously. A correlation close to zero shows variables that have little to no influence on each other. A correlation of -1 shows an inverse relationship between two variables. As one variable increases, the other variable decreases.

Maximum drawdown is the greatest cumulative percentage decline in month-end net asset value due to losses sustained by the Series during any period in which the initial month-end net asset value is not equaled or exceeded by a subsequent month-end net asset value.

Maximum initial risk refers to percentage of assets under management that will initially be invested in any one futures position or contract.

The S&P 500 is one of the most commonly used benchmarks for the overall U.S. stock market. It is an index consisting of 500 stocks chosen for market size, liquidity and industry grouping, among other factors. The S&P 500 Index represents the price trend movements of the common stock of major U.S. public companies.

The Sharpe Ratio is a formula used to measure risk-adjusted performance. The Sharpe Ratio is calculated by subtracting the risk-free rate, the theoretical rate of return on an investment with zero risk, from the rate of return for a portfolio and dividing the result by the standard deviation of the portfolio.

The Sortino Ratio measures the risk-adjusted return of an investment portfolio or strategy. The formula is the portfolio's realized return minus the target rate of return divided by downside risk.

Risks

PAST PERFORMANCE IS NOT INDICATIVE OF FUTURE RESULTS.

Performance is expected to be volatile; the net asset value per unit may fluctuate significantly in a single month.

- Superfund Capital Management, Inc. is the sole trading advisor for the fund. The use of a single advisor could mean a lack of diversification and, consequently, higher risk.

- An investment in Superfund Green L.P. Series A or B involves substantial risk and may result in the complete loss of principal invested.

- This document constitutes neither an offer to sell nor a solicitation to invest.

- Each series is speculative and is highly leveraged. As a result of leveraging a small movement in the price of a contract can cause major losses. We will monitor the leverage of each Series regularly, but it is not limited by the amount of leverage it may employ.

- Redemption requests may be denied if the fund's advisor, Superfund Capital Management, Inc., determines that transfer may result in adverse legal or tax consequences for the fund.

- Superfund Green, L.P. is not a regulated investment company (or mutual fund).

- Performance results shown in this document are net of fees. Past performance is not indicative of future results. Superfund-products are speculative investments. A complete loss of the principal invested cannot be excluded. Information published in this publication concerning Superfund Green, L.P. Series B constitutes neither an offer to sell nor a solicitation to invest and is intended for informational purposes for existing investors only.
