Superfund Green predominantly employs medium- to long-term trend following strategies and trades in approximately 150 liquid financial and commodity markets around the world. For further diversification, Superfund Green also utilizes short-term strategies, such as forecast models, counter trend, and short-term trend following. This managed futures strategy aims to achieve high returns in both falling and rising markets and a target volatility of about 50% p.a. The Superfund Green managed futures strategy has been utilized successfully in the long term since March 1996 and is based on proprietary, fully automated trading systems, which effectively eliminate human emotion. Overall risk is permanently screened and each trading position is continuously adjusted according to market volatility. Due to its low correlation to other asset classes in the long term, Superfund Green can be a valuable addition to every portfolio.

Performance results are net of fees (excluding upfront fees and taxes). Past performance is not indicative of future results. Superfund products are speculative investments. A redemption charge will be payable on all redemption prior to the sixth year.
