

## SUPERFUND GREEN SILVER SICAV ENDED THE MONTH OF DECEMBER WITH A PERFORMANCE OF 9.47 %

Superfund Green predominantly employs medium- to long-term trend following strategies and trades in approximately 150 liquid financial and commodity markets around the world. For further diversification, Superfund Green also utilizes short-term strategies, such as forecast models, counter trend, and short-term trend following. This managed futures strategy aims to achieve absolute returns in the long run in both falling and rising markets. The Superfund Green managed futures strategy has been utilized successfully in the long term since March 1996 and is based on proprietary, fully automated trading systems, which effectively eliminate human emotion. Overall risk is permanently screened and each trading position is continuously adjusted according to market volatility. Due to its low correlation to other asset classes in the long term, Superfund Green can be a valuable addition to every portfolio.

By investing in Superfund Green Silver, you can potentially profit from the unique Superfund Green trading strategy, and the value of your investment will be linked to the value of, or essentially denominated in, silver – a precious metal which is also in high demand for industrial production.

of the past 12-months-periods

11/17/2014 - 12/31/2014	-0.67 %
12/31/2014 - 12/31/2015	-12.54 %
12/31/2015 - 12/30/2016	-12.88 %
12/30/2016 - 12/31/2017	33.83 %
12/31/2017 - 12/31/2018	-31.20 %

Schematic representation only. Allocations are continuously adjusted based on changing market conditions.

**DAILY LIQUIDITY:** The subscription form has to be received by the relevant SUPERFUND office by 12.00 (noon) and the investment amount has to be credited two business days prior to the respective subscription dates.

Performance results shown in this document are net of fees. This fund is denominated in USD and therefore causes an additional currency risk, i.e. the net performance may rise or fall due to currency fluctuations. Past performance is not indicative of future results. Superfund-products are speculative investments. A complete loss of the principal invested cannot be excluded. This publication constitutes neither an offer to sell nor a solicitation to invest. Such offer or solicitation will be made only in those jurisdictions where permitted by law and will be preceded or accompanied by a current prospectus and such other documents as may be required, such as the latest audited financial statements and audit report. In addition to the respective trading results of the respective Superfund Strategy, the performance of the price of silver in USD has a direct influence on the value of these silver share classes because the current value of the respective share class portfolios are additionally hedged through financial instruments whose values rise and fall along with the rise and fall of the USD price of silver. This means that if the fund assets are completely hedged into silver, then a 5 % rise in the USD price of silver would lead to an additional 5 % gain in the net asset value of the silver share class. Conversely, a 5 % drop in the USD price of silver would lead to an additional 5 % decline in the net asset value. Because the price of silver can be subject to considerable fluctuations within short periods of time, these silver share classes may be more volatile than other types of investments. A decline in the USD price of silver futures or forward contracts resulting from any of these risk factors, or from any other potential risk factor which could directly affect the price of silver, would likewise have a direct influence on the value of the silver share classes. A DROP IN THE PRICE OF SILVER WILL RESULT IN A REDUCTION IN THE NET ASSET VALUE OF THE SILVER SHARE CLASSES.
