Superfund Red USD SICAV

Superfund Red (a) is a short-term managed futures strategy that aims to generate profits in any market environment - independent of medium to long-term trends, and regardless of whether markets are rising or falling. (b) The Superfund Red strategy has been tested over the past several years with real money - that of Superfund founder Christian Baha - and continuously improved over this time. The Superfund Red strategy has also been carefully backtested against 14 years of historical market data. The Superfund Red strategy trades in some very different futures and foreign exchange markets around the globe. These markets are very liquid and include not only currencies, bonds and equity indices but also various commodities, such as energy and metals. Trading this great variety of markets, opportunities for short-term trading profits are constantly to be found since the markets move quite independently of each other. (c) The Superfund Red trading strategy is based upon many different individual short-term trading systems - tested in the markets over many years in live, real time operation - which are combined into a robust, overall "system of systems". The individual trading systems are put into action selectively, depending on prevailing market opportunities, and enabling profits to be generated from short-term trading positions, independent of any medium- to long-term trends.
